Promising but disappointing

By W. James D. Easton

In my opinion, a good handbook should begin each subject treated with a clear elementary introduction suitable for nonspecialists, and continue to include a collection of tables, diagrams, and formulas to aid the specialist.

The introductions are sometimes incomplete and misleading. The specialist will usually not find the reference material normally expected in handbooks.

It is an attractively printed volume and generally quite readable. The global plan is generally quite good, and one can hope that this work will be allowed to mature in future revisions.
